

VIEW OF THE ACADEMIC CORE

The perspective drawings shows a view of how the campus would appear from a point under a loggia looking across the central quadrangle. As opposed to the recessed levels of smaller courtyards, the central quadrangle would be in the same plane with the loggias and first floor classrooms.

A campanile is envisioned at the center of the campus. This geometric sculpture in tripod form, rising one hundred feet above the central quadrangle, would become the symbol of the college, visible from the Dulles Airport Access Highway and other parts of the Reston community.

The architecture presented is but one of many styles that could be developed to express the proposed Modular Architectural System. Modern technology makes possible an unlimited variety of shapes, textures and colors that may be selected as the college program is further developed.
